

Narrative Hypermedia

Lynda Hardman TU/e

<http://www.cwi.nl/~lynda>

Narrative <-> Hypermedia

Contradiction in terms!

- Narrative:
storyline with beginning, middle and end
<http://www.uni-koeln.de/~ame02/pppn.htm>
- Hypermedia:
collection of linked fragments,
no required boundary

Hypertext community

- Experiments with stories '80s onwards

- Michael Joyce: Afternoon, a Story 1990
- Stuart Moulthrop: Victory Garden 1992
- Shelley Jackson: Patchwork girl 1995
- M.D. Coverley: Califia 1999

http://en.wikipedia.org/wiki/Hypertext_fiction

- Loops/choice points or events from different perspectives

- Amanda Goodenough: Inigo Gets Out 1987

- Author can maintain some control by making new material accessible only after reader has read all required passages

Hyperlinks in Film

- Different forms of hyperlinks:
 - Choice points with different scenes
 - Choice points with alternative storylines
Run Lola Run (Lola Rennt) 1998,
Sliding Doors 1998,
Groundhog Day 1993
 - Different parallel perspectives
(TV movie on different channels)

Hyperlinked comics

Scott McCloud:

Understanding Comics (1993)

Reinventing Comics (2000)

Making Comics (2006)

Juxtaposition of frames “forces” reader to fill in the gaps, thus developing a “narrative”

<http://www.scottmccloud.com>

Temporal flow

- A story has a beginning, a middle and an end.
- The events being talked about also have a temporal order – these do not have to be the same
Arundhati Roy, *The God of Small Things*
- When constructing a hypermedia narrative challenge is even greater, since author has less control on what the reader reads next
- Luesebrink explains different temporal layers in a story: cognitive time and interface time
- Presentation itself also has time
Do You Have the Time? Composition and Linking in Time-based Hypermedia, Hardman et al.,
<http://doi.acm.org/10.1145/294469.294515>

NM² (New Media for a New Millenium)

- Exploring the creation of interactive narratives
- Narrativity in ShapeShiftedTV ,
Maureen Thomas (Cambridge University)
- Graph of choice points. Every time a choice is made, the remaining set of choices is reduced.
- <http://www.ist-nm2.org/>

Human->machine

- So far discussed stories/narratives created by humans
- What do we need to understand to allow a computer to do this too?
 - topic of the story
 - intended listener
 - representation of discourse

Discourse model components

- A discourse model contains knowledge about:
 - genre composition;
 - discourse structure building;
 - discourse structure population.
- genre: a distinctive type of literary composition that defines characteristic attributes of this composition e.g. a flow of discourse.
- discourse structure: identifies the flow of discourse by specifying concepts and their order plus situation of these concepts within sections and subsections.
- order: a meaningful order based on semantic relations between items
- A generation process uses knowledge in the discourse model to generate a final presentation

The Role of Genre

- Genres differ in discourse flows
 - Essay, biography: informative genres, oriented on providing information
 - Newspaper article: stronger narrative structure in which climax is essential
- Different mechanisms are required to support different genres
 - Essay, biography: find a set of relevant concepts, decide in what order they should be presented
 - Newspaper article: identify climax, find relevant concepts

Falkovych & Bocconi, Creating a Semantic-based Discourse Model for Hypermedia Presentations: (Un)discovered Problems

Talk Outline

- ☐ Motivation
 - ☐ Example
 - ☐ Scenarios
 - ☐ Technical details
 - Annotations
 - Editing Process
 - ☐ Conclusions
-

Video Documentaries on the Web

- ❑ Traditional video authoring: there is only one final version, what is shown is the choice of the author/editor
 - ❑ Proposed video authoring:
 - Annotate the video material semantics
 - Show automatically what the user asks to see, using presentation forms a film editor would use
-

Video material

- ❑ Focus on video interviews about controversial issues
 - ❑ **Interview with America** video footage with interviews and background material about the opinion of American people after 9-11
www.interviewwithamerica.com
-

Example: *What do you think of the war in Afghanistan?*

"I am never a fan of military action, in the big picture I don't think it is ever a good thing, but I think there are circumstances in which I certainly can't think of a more effective way to counter this sort of thing..."

What do you think of the war in Afghanistan?

I am not a fan of military actions

I cannot think of a more effective solution

War has never solved anything

Two billions dollar bombs on tents

The annotations

□ Rhetorical

- Rhetorical Statement
(mostly verbal, but visual also possible)
- Argumentation model: Toulmin model

□ Descriptive

- Question asked
 - Interviewee (social)
 - Filmic *next slide*
-

Filmic annotations

Continuity, e.g.

- lighting conditions
 - background sound
 - gaze direction of speaker
left, centre, right
 - framing continuity
close-up, medium shot, long shot
 - camera movement
none, pan left/right, shaking, tilt up/down,
zoom in/out
-

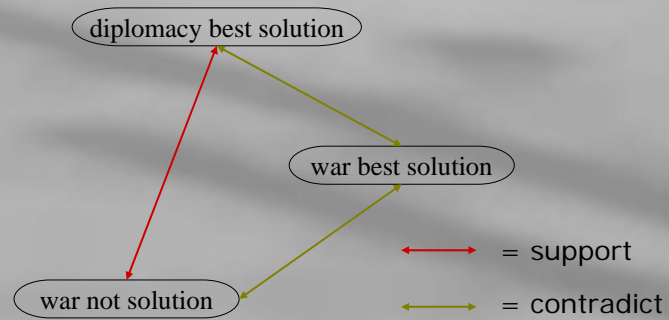

Statement encoding

- ❑ Statement formally annotated:
 - <subject> <modifier> <predicate>
 - E.g. "**war best solution**"
 - ❑ A thesaurus containing:
 - Terms (155)
 - Relations between terms: *similar* (72), *opposite* (108), *generalization* (10), *specialization* (10)
 - E.g. **war** *opposite* **diplomacy**
-

Connect statements

- ❑ Using the thesaurus, generate related statements and query the repository
 - "war best solution",*
 - "diplomacy best solution",*
 - "war not solution"*
 - ❑ Create a **graph** of related statements
 - nodes are the statements (corresponding to video segments)
 - edges are either *support* or *contradict*
-

Semantic Graph

Toulmin model

*57 Claims, 16 Data, 4 Concessions,
3 Warrants, 1 Condition*

Analysis of the Example

Two billions dollar bombs on tents

Claim

contradict

Claim

I cannot think of a more effective solution

weaken

Concession

I am not a fan of military actions

Claim

support

War has never solved anything

Facts and features

- Annotations: 1 hour annotated, 15 interviews, 60 interview segments, 120 statements
- Partially **tunable**: examining the Segment graph gives feedback on the quality of the annotations and the thesaurus

←→ = support

←→ = contradict

Controlling the Bias

- ❑ Video documentaries are not neutral account of reality: the selection and editing of the footage expresses a point of view
- ❑ Editing strategy:
 - Balanced
 - Pro opinion X
 - Against opinion X
- ❑ We use:
 - Logos (the statements)
 - Ethos (based on user profile)
 - Film editing (e.g. framing, gaze)

Vox Populi interface

Question		Interviewee	Opinion				
<div>Why did they do what they did?</div> <div>What do you think of the casualties among civilians?</div> <div>What do you think of the Afghanistan war?</div> <div>What are the consequences of the war?</div> <div>What are the roots of the problem?</div> <div>What do you think about the Anthrax?</div>		<div>Cameron Parking Guard at Stamford</div> <div>Lawyer in Harvard</div>	<div>War in Afghanistan - Pro</div>	Position

Done		Reset					

Conclusions

- ❑ Automatic generation of video interviews augmented with supporting and/or contradicting material
 - ❑ The **user** can determine the subject and the bias of the presentation
 - ❑ The **documentarist** can add material and let the system generate new documentaries
-

Pointers & Acknowledgments

- ❑ This presentation and a Demo available at:
<http://www.cwi.nl/~media/demo/IWA/>
 - ❑ This research was funded by the Dutch national ToKeN I²RP and CHIME projects.
-

Conclusions

- Hypermedia narrative is still an experimental art form
Marc Bernstein <http://www.eastgate.com/>
Online magazine Tekka
<http://www.eastgate.com/catalog/Tekka.html>
Online writing centre <http://trace.ntu.ac.uk>
- We can't (yet) generate rich hypermedia narratives
- We can make small steps from domain knowledge to human-consumable information
- We can add rich rhetorical information and generate video sequences
Re-use of visual material is "forgiving"
